Senior Fullstack Engineer | React | React Native | Node.js | AWS | Scalable Web & Mobile Platforms | CI/CD & Security Automation

SUMMARY

Senior Fullstack Engineer with 6+ years designing and scaling cloud-native web and mobile solutions using React, Next.js, React Native, Node.js, NestJS, TypeScript, and AWS.

Brings hands-on AI engineering experience integrating conversational agents, RAG workflows, model evaluations, and MCP-based automation. Owned end-to-end delivery of an AI-powered platform in an international team, supporting its first ~US$700K enterprise agreement. Previously led internationalization of a platform serving 1M+ users, reducing support tickets by 30% and enabling expansion into Europe and the US. Combines fullstack ownership with CI/CD automation, observability, and secure development practices.
Expert in React, Node.js/NestJS, TypeScript, AWS, and AI services.

EXPERIENCE

Senior Software Engineer

micro1 | *Remote* *July 2026 – Present*

- Owned architecture and fullstack delivery of an AI-powered company qualification platform from concept to production MVP, supporting its first ~US$700K enterprise agreement in less than a month of project life using React, NestJS, PostgreSQL, Redis, and AWS.
- Built configurable AI conversations incorporating company-specific context and RAG workflows; partnered with AI engineers on conversation evaluations and model benchmarking to improve qualification accuracy and conversation quality.
- Engineered calling campaigns and asynchronous workflows supporting 1,000+ requests/minute, enabling campaigns associated with US$1M+ in revenue and bulk processing of qualified commercial opportunities.
- Optimized interfaces handling millions of records through virtualization, pagination, and TanStack tooling, reducing legacy load times from 5+ minutes to 30–90 seconds and delivering new views loading in under 20 seconds.
- Integrated Slack, GitHub, Linear, and Claude/Codex through MCP, increasing personal task completion throughput by approximately 70% and reducing response times by 30%; automated leadership reporting to improve handoffs across time zones.
- Established Sentry observability and layered AI-assisted code/security reviews, contributing to approximately 50% more deployments and 60% fewer production bugs. Detected a critical defect early enough to help protect the ~US$700K agreement.

Senior Fullstack Engineer

Click Planos | *Brasília, Brazil* *July 2025 – July2026*

- Decoupled a monolithic Next.js application into a scalable frontend (Next.js) and backend (NestJS); delivered 20% ahead of a 40-day deadline, boosting user interactions 40% and conversion 4% on a platform handling thousands of daily registrations. Stack: Next.js, NestJS, TypeScript, TanStack Query, Zod, Zustand, PostHog.
- Architected cloud-native backend services with Redis caching, PostgreSQL persistence, and Drizzle ORM on AWS (S3, EC2, RDS, Lambda), applying performance tuning to sustain higher traffic volumes and improve responsiveness.
- Shipped third-party integrations with D4Sign, HubSpot, Pipedrive, and PostHog for contract signing, CRM automation, and product observability via RESTful APIs in Node.js/NestJS and TypeScript, eliminating manual operational effort.

• Accelerated delivery speed 30% and reduced production issues 20% by implementing CI/CD with GitHub Actions, Doppler-managed secrets, and AI-assisted workflows (CodeRabbit, Cursor, Claude).

Senior DevSecOps Analyst

Evernow | *São Paulo, Brazil* *September 2022 – July2026*

• Architected secure CI/CD pipelines for healthcare and financial platforms serving millions of users, integrating SAST, SCA, and DAST tooling (Fortify, Veracode, SonarQube) with GitHub Actions and AWS CloudWatch; cut first-response SLA from 3 days to 24 hours and ticket volume 30% through Python-based automation.

• Led code-level remediation of SQL Injection vulnerabilities across ~300 applications, building Python integrations with Fortify APIs to deliver OWASP Top 10–compliant code at scale.

Senior Fullstack Engineer

Fridom | *Brasília, Brazil* *January 2020 – January 2025*

• Engineered a real-time mobile platform for event discovery and transactions with geolocation, WebSocket-based payments, QR code validation, JWT, and role-based access control, serving hundreds of thousands of users. Stack: React Native (Expo), Node.js, WebSockets, PostgreSQL, Zoop.

• Diagnosed and resolved a critical payment bug via log tracing in AWS EC2 (PM2), reducing API response time from 5 minutes to 10 seconds and recovering over R$50K in financial discrepancies.

• Enhanced API security by redesigning endpoints and migrating from Node.js to NestJS, mitigating large-scale DDoS and brute-force attacks and reducing response time by 12%.

Fullstack Engineer

Fest Intermediação e Tecnologia | *Brasília, Brazil* *November 2023 – November 2024*

• Developed a real-time ticketing dashboard with Next.js and WebSockets, delivering live transaction updates, financial analytics, and QR code generation; supported thousands of weekly transactions. Stack: Next.js, React, WebSockets, PostgreSQL, React-Charts.

• Migrated backend from Node.js to NestJS with Swagger-documented APIs, improving response time 4% and establishing a standardized, microservices-ready endpoint architecture.

• Implemented payment infrastructure from scratch by integrating Asaas APIs, enabling secure, real-time transactions aligned with business growth. Stack: Node.js, NestJS, WebSockets, Asaas API.

KEY PROJECTS

Global Platform Internationalization — *Fridom · 2023–2024*

Led the internationalization and full-system refactor of a platform with 1M+ users, restructuring 2 mobile apps, 3 Node.js APIs, and a dashboard to support 4 languages via a dynamic, real-time translation management system.
Impact: Reduced support tickets 30% and unlocked expansion into Europe and the US, generating new revenue.
Tech: *React Native, React.js, Node.js, PostgreSQL, i18n*

Cloud-Native Application Architecture — *Meu Benefício · 2025*

Designed and implemented a cloud-native architecture from scratch for a government benefits platform, focused on containerization, environment isolation, scalable deployment, and CI/CD-driven release workflows.
Impact: Delivered production-ready infrastructure with automated deployments and consistent environment management across stages.
Tech: *Node.js, PostgreSQL, Docker, AWS EC2, GitLab CI/CD*

High-Risk Project Recovery — *Finatec · 2023–2024*

Acted as Technical Lead to recover a critical agricultural research platform, restructuring delivery workflows, aligning business requirements with engineering execution, and restoring client trust.
Impact: Prevented a R$600K contract loss and unlocked R$120K in additional investment through improved delivery.
Tech: *Python, Django, Agile, Jira*

EDUCATION

Postgraduate (Lato Sensu) in Information Technology — UniCEUB, Brazil (February 2023 – October 2023)
Bachelor of Engineering in Computer Engineering — UniCEUB, Brazil (January 2015 – June 2020)

CERTIFICATIONS

Apache Airflow – The Hands-On Guide — Udemy, 2024
Secure Developer Professional — CECyber, 2022
React Native: Working with Function Components — Alura, 2020

LANGUAGES

English: C1 Advanced · **Portuguese:** Native · **Spanish:** B1 Intermediate · **French:** A1 - Beginner

SKILLS

Languages: TypeScript · JavaScript · Python · Go
Frontend: React.js · Next.js · React Native · Expo · TanStack Query · TanStack Router · TanStack Form · Zustand · Zod · i18n · Table Virtualization
Backend: Node.js · NestJS · REST APIs · WebSockets · Drizzle ORM · TypeORM · Swagger · JWT · OAuth · Hatchet · Background Jobs · Webhooks · Third-Party Integrations
AI Engineering: Conversational Agents · RAG · Context Integration · Model Evaluations & Benchmarking · OpenAI API · Anthropic API · LiveKit · Model Context Protocol (MCP) · Multi-Agent Orchestration · Claude Code · Codex
Databases: PostgreSQL · Redis · MySQL · MongoDB · Database Migrations · Query Optimization
Cloud & DevOps: AWS (Lambda, S3, EC2, RDS, CloudWatch, Amplify) · Azure Blob Storage · Docker · CI/CD · GitHub Actions · GitLab CI · Terraform
Architecture: Clean Architecture · SOLID · DDD · Microservices · API Design · Real-Time Systems · Asynchronous Processing · System Refactoring
Security & Quality: OWASP Top 10 · SAST/SCA/SDLC · Unit & Integration Testing · Secure-by-Design · Fortify · SonarQube · Sentry · Production Observability · AI-Assisted Code & Security Reviews · Greptile · CodeRabbit
Methodologies & Collaboration: Agile · Scrum · Kanban · Jira · Linear · GitHub · Slack · Asynchronous Collaboration · Cross-Functional Delivery
